Challange

Gemography marketplace is an app that exposes our candidate pipeline progress to our CTO clients. It focuses (for now) on shortlisted candidates and the result of our assessment (from all interactions we had with them).

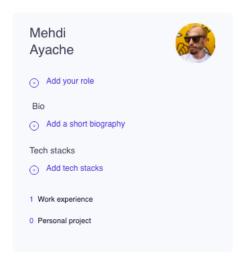

Intent

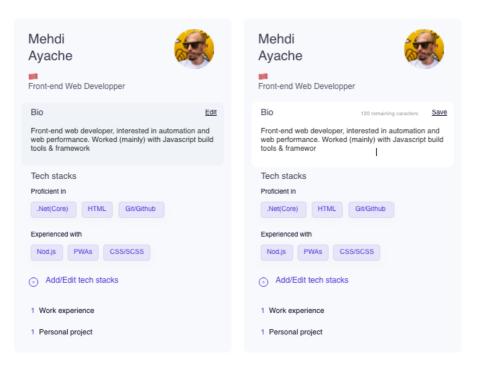

- To make the CTO willing to interview our shortlisted candidate
- To make available for the CTO all the data that he/she will need to make a decision (to interview or not)
- To showcase the candidate's high potential (assessment data + bootcamp data)
- For candidates who we didn't hire yet and who are not 100% a match with the open position: to sell the CTO on their potential to be bootcamped and become a match
- To show to the CTO that he/she saved valuable engineering hours by letting us do the assessment for him/her
- To confirm our brand positioning as highly technical
- To confirm our brand positioning as experts in Talent Acquisition
- To confirm our brand positioning as data-driven

inFinicom

https://infinicom.fr/

infinicom is one of the pioneers in the production of goodies & corporate gifts for companies.

The goal was to create a break with the classic ecommerce model that they had had for years and to match the website interface with the new marketing strategy of the company. Communication by niche and lead generation. Focus on the types of targets and not the products.

I therefore integrated a Funnel VS classical display vision by emphasizing the sales pitch rather than the product itself, while increasing brand voice by involving the visual elements of the brand.

the mission also included rebranding.

I had the privilege of being chosen to collaborate on one of the most avant-garde mobile elearning applications in the Middle East. The ministry of culture in Saudi Arabia commissioned the Oslob agency to design and develop a mobile platform with a gamification layer that allows users to learn Arabic writing step by step in its various scripts (Kufi, Ruqaa ...).

I had 3 weeks flat to complete the project, I collaborated directly with the development team by taking the lead not only as a Designer but as a Product Owner, to create the best user-journey by guiding the development and assisting in the creation and ehance the technical specifications.

Design of a Shopify-based theme by changing the classic layout to match the economic model of the platform. The subscription.

community multi-sourcing and multi-targeting was a challenge, we had to come up with UI solutions to help members navigate the catalog not only by type of product but especially by country / region of the product.`

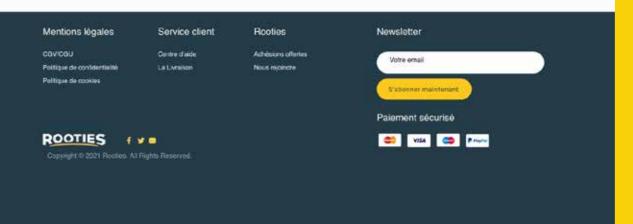

The mission also includes branding and advice on brand positioning

App

https://apps.apple.com/us/app/id1528765015

Riderco is a mobile application for sharing motorbikes between individuals and professionals.

The challenge was to simplify the communication between demand and supply and the conclusion of deals. The user-journey after the selection of the motorcycle takes place completely via an intelligent chat system which exchanges requests and validations between the two users.

Web app
https://kwayria.com/

Kwayria is a networking platform between coach and young soccer players in Morocco. The platform arrives in multi-lingual, French & Arabic, the challenge was to arrive with a user experience that allows the youngest to easily create a profile & get noticed by coach with a focus on performance and technical details. Coaches, through their dashboard, must be able to do multi-cross searches to easily identify the players and get in touch with them via a simplified chat system that allows the exchange and viewing of files and multi-media content.
